

ACS Data Vault

Keep your data safe and accessible with our new
Data **Backup** and **Recovery** Services

ACS Data Vault is more than just an on-line backup service. It is also a disaster recovery plan. This service gives you access to your data even when you don't have access to your server. You can also be confident that your system will be re-loaded correctly because it will be configured by ACS.

Facts:

- 8% of hard drives fail within the first 2 years of installation
- Hard drives older than 2 years fail at a rate of 7% per year
- The average time to install a new server can be more than a week
- With the ACS Data Vault service you will be able to run your business with minimal down time even if your server has to be replaced

ACS Data Vault Services

ACS uses a powerful on-line service to guarantee a successful secure backup of your data. Your data will be backed up daily and you will be updated by e-mail on the status of the backup so you can be certain your data is safe. In the event of a server crash or a destroyed file we can have a single file restored immediately or an entire system restored, in most cases, the same day. If your new server won't be shipped for days or weeks you will have the ability to continue to run your software from ACS' remote servers.

Advantages

- Receive daily reports by e-mail showing the status of your daily backups
- Quickly access files for restore
- Have an offsite backup of your entire ACS system
- ACS does the work for you. In the event of a lost file or system crash ACS will restore all data back to your system
- Minimal Down Time. In the event of a total system failure you can run your software on one of ACS' remote servers. When your server is replaced we will reload your system with the most up to date data

Offsite Backup

- Backup your ACS system offsite
- Backup your data every day
- Archived data allows you to retrieve files up to 10 days old

Reporting

- Receive daily reports so you can be sure your backup was successful
- ACS will be notified of any problems with the backup so we can guarantee your data is safe and up to date

ACS Does the Work for You

- ACS will restore single files or directories immediately
- In the event of a server crash ACS will restore your entire system to a new drive or new server

Access to ACS Remote

- In the event of a total system failure we will load your current system on our remote servers so you can continue to run your company until the server is replaced.

Why ACS Data Vault?

- ✓ Offsite Backups
- ✓ Be back up and running in hours not weeks
- ✓ Access to ACS remote servers
- ✓ Access to archived data up to 10 days old
